

Bexar County Influenza and COVID-19 Surveillance Report, 2020-2021 Season; 2021 MMWR Week 7

(February 14, 2021 – February 20, 2021)

Summary

Influenza activity continues to be sporadic in San Antonio and Bexar County. Compared to the previous week, the percentage of patient visits due to influenza-like illness (ILI) increased and there was an increase in reports of specimens testing positive for influenza by the public health and hospital laboratories. There were no influenza-associated pediatric deaths and no influenza-associated outbreaks reported this week.

COVID-19 continues to be widespread throughout Bexar County. Due to COSA office closures, no deaths were reported for MMWR Week 7. Additional data for COVID-19 can be found on the San Antonio Metropolitan Health District website: <https://covid19.sanantonio.gov/About-COVID-19/Dashboards-Data/Surveillance>.

U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet)

Information on patient visits to health care providers for influenza-like illness (ILI) is collected throughout Bexar County. Health care providers voluntarily report this information to ILINet.

Laboratory Results

Hospital and Public Health Laboratory Testing

Hospital laboratories voluntarily report influenza tests (antigen, culture, and PCR) to the National Respiratory and Enteric Virus Surveillance System (NREVSS). Providers throughout Bexar County also submit specimens for influenza testing and SARS-CoV-2 testing (PCR and antigen) to the San Antonio Metropolitan Health District's (Metro Health) public health laboratory. The results reported by Texas NREVSS participants and Metro Health for the current week are summarized in the table below.

Sentinel Provider Laboratory Testing

Providers throughout Bexar County also submit influenza test results (antigen, PCR) to Metro Health on a voluntary basis. These sites are recruited to send this information on a weekly basis. The results from the participating providers are summarized in the table below (Table 3).

Texas Syndromic Surveillance (TXs2)

Hospital providers throughout Bexar County voluntarily report data based on chief complaints of Influenza-like Illness (ILI) defined as fever (temperature of 100°F [37.8°C] or greater) plus cough and/or sore throat. Participating providers are required to report data every 24 hours.

Age Group	ILI Cases	ILI Percentage
0 – 4 Years	19	24.4%
5 – 24 Years	18	23.1%
25 – 49 Years	14	17.9%
50 – 64 Years	17	21.8%
65 +	10	12.8%

Statewide Influenza Activity Map

Figure 5: Texas Map Displaying the Highest Level of Influenza or ILI Activity Reported by County for the Week Ending February 20, 2021 (MMWR Week 7)

Note: The majority of influenza cases are not reportable by law in Texas. This map contains data from sentinel sites and only displays influenza and ILI cases that were reported to public health. Positive laboratory results are reported according to specimen collection date, or date received in the laboratory if the former is unknown.

- Note: Bexar County seasonal baseline was calculated using a method similar to CDC's National/Regional baseline calculation. For further information on this method, please visit: <https://www.cdc.gov/flu/weekly/overview.htm>
- Influenza-like illness (ILI): patients with a fever of $\geq 100^{\circ}\text{F}$ and a cough/sore throat
- Influenza activity codes are determined using GIS and are based on influenza activity per zip code tabulation area (ZCTA) within a quadrant-based system for Bexar county.
 - No activity = No or low ILI activity (all four quadrants have <20 per ZCTA population) and no lab confirmed cases
 - Sporadic = Isolated cases of lab confirmed influenza and increased ILI activity in at least one of the four defined Bexar quadrants, but activity does not exceed 100 cases per ZCTA population.
 - Localized =ILI activity within one Bexar quadrant increases above 100 cases per ZCTA population, but all other quadrants remain below 100 cases AND lab confirmed cases have increased since the previous week
 - Widespread = ILI activity has increased above 100 cases per ZCTA population in 2 or more quadrants and lab confirmed cases of influenza have had an increased activity level at least one of the three prior reporting weeks
